Subject: Conversation with Elvin Pedrosa
Date: Monday, September 17, 2018 6:47:45 PM

Iva Jurkovic 5:24 PM:

Hey so Data Tools is installed and it works. Can we install the same for Kristin Kusheva, i guess hers would have to go through Citrix. Let me know if i need to open a ticket for that

Elvin Pedrosa 5:44 PM:

good to know. yes, put in a ticket please
with this working, hopefully there shouldn't be a need to log into the server going forward
windows user sessions on the server takes up resources

Elvin Pedrosa 5:58 PM:

regarding your ticket, access requests to Oracle databases needs to go through production support. If you need Firewall connectivity from nyacctsqli02 to a new server, you need to provide the destination hostname and port number to be opened, if it's not already allowed.

Elvin Pedrosa 1:20 PM:

just spoke to roman. it seems like the firewall connection to the server he stated is already open

Iva Jurkovic 1:20 PM:

ok so i can connect from both local and nyacctsqli02 server?

Elvin Pedrosa 1:20 PM:

test it out

Iva Jurkovic 1:20 PM:

ok

Elvin Pedrosa 1:21 PM:

not sure if you'll require a new ODBC entry created
did they give you new credentials or anything?

Iva Jurkovic 1:23 PM:

i need pw

Elvin Pedrosa 1:23 PM:

for what acct?

Iva Jurkovic 1:24 PM:

one sec

Iva Jurkovic 3:05 PM:

the connection from the server does not work

Elvin Pedrosa 3:41 PM:

you're probably connecting to the wrong thing
server ora01.uat.fxcorp.prv

Iva Jurkovic 3:42 PM:

same thing i'm connecting to from my local, which works

Elvin Pedrosa 3:42 PM:

what is the username?
cuz of LDAP probably
local what? ssdt?
you connecting to this via SSIS?

Iva Jurkovic 3:43 PM:

yes
the one i connected to from my local pc is
nyoraname2.nydc.fxcorp.prv:3060:3131

Elvin Pedrosa 3:44 PM:

is this asking you to select an ODBC entry?
yea, thats the LDAP server.
"the one i connected to from my local pc is

nyoraname2.nydc.fxcorp.prv:3060:3131 Â "

you're talking about the Oracle SQL developer app i'm assuming

Iva Jurkovic 3:45 PM:

yes

from my local i'm connecting on sql developer

nyoraname1.nydc.fxcorp.prv:3060:3131

Elvin Pedrosa 3:46 PM:

then try typing in ora01.uat.fxcorp.prv Â in the server name field

or UAT01

roman said UAT100 is just an alias

also, what is the username you're using? i may have to create an ODBC source

Iva Jurkovic 3:48 PM:

INTEGRATION_INBOUND Â

Elvin Pedrosa 3:49 PM:

ok. let me know if inputting the server name above works

Iva Jurkovic 3:49 PM:

trying now

Elvin Pedrosa 12:16 PM:

hi, what rights does nicoleta need in sql? read only access? which dbs?

Iva Jurkovic 12:16 PM:

no read and write

reports, volume, keys

Elvin Pedrosa 12:16 PM:

okay.

i need to install windows updates on nyacctsql02

this friday if possible

Iva Jurkovic 12:17 PM:

sure

that's fine

Elvin Pedrosa 12:17 PM:

cool

Iva Jurkovic 3:18 PM:

Hey

Elvin Pedrosa 4:44 PM:

whats up

Iva Jurkovic 4:45 PM:

I can't connect to the oracle form my local pc by using SQL Data Tools

I need Oracle installed on my computer

plus **Oracle Data Access Components (ODAC)**

Elvin Pedrosa 4:45 PM:

ok put in a ticket. i can do it tomorrow

Iva Jurkovic 4:46 PM:

ok

Elvin Pedrosa 2:36 PM:

when can i install that oracle stuff for you

Iva Jurkovic 2:45 PM:

at 4?

Elvin Pedrosa 4:27 PM:

sure. i'm available now

Iva Jurkovic 4:27 PM:

i can't now

let's do it monday

Elvin Pedrosa 4:27 PM:

ok
what time will you be done with the server?

Iva Jurkovic 4:28 PM:

5

Elvin Pedrosa 4:29 PM:

cool ty

Iva Jurkovic 4:31 PM:

np

Iva Jurkovic 5:01 PM:

ok, i'm off the server

Elvin Pedrosa 5:02 PM:

thanks

Iva Jurkovic 5:02 PM:

np

Elvin Pedrosa 11:47 AM:

hey iva. what can be done about all these high CPU alerts on the server? is there a way to optimize these queries?

it has been alerting way more than usual lately. puts a lot of stress on the hardware

Iva Jurkovic 1:21 PM:

unfortunetly now

not

and it's been alerting because i have to keep re running things because of the password changes every weekend.

Elvin Pedrosa 1:23 PM:

high cpu usage because of password changes? doubt it

Iva Jurkovic 1:24 PM:

that's not what i said

if i run something and then the next monday i come in and i have to restart the server

i lose all the data that means i have to re run the same query again

Elvin Pedrosa 1:24 PM:

and this can't be run using a service account?

Iva Jurkovic 1:25 PM:

so if i have to re run the same query 4 times because i'm forced to close the server and re start, then yes the frequency of high cpu usage is because of the password change

no

what do you mean service account?

Elvin Pedrosa 1:26 PM:

a windows service account

Iva Jurkovic 1:26 PM:

sql login?

Elvin Pedrosa 1:26 PM:

that doesnt have its password changed every weekend

and set that service account to run an automated process or whatever it is

Iva Jurkovic 1:27 PM:

if you can give me a login that i can use to log into the SSMS from my local computer that is not restarted every weekend

then i can use that

it's not an automated process

we are building a system

i have to run the history so it is a lot of data

Elvin Pedrosa 1:30 PM:

okay. and it needs to be a windows login because it needs to access something on the network?

Iva Jurkovic 1:31 PM:

it doesn't need to be windows login. which login can i use?

Elvin Pedrosa 1:32 PM:

well, you already have the finanalysis sql login. would that work?

Iva Jurkovic 1:32 PM:

i strated using that one

started

hopefully i won't need to re start

Elvin Pedrosa 1:33 PM:

ok so you havent been using that acct for the weekend process when the windows pw changes, right?

Iva Jurkovic 1:34 PM:

weekend process?

Elvin Pedrosa 1:35 PM:

yes. you said you have to re-run something because of password changes every weekend

Iva Jurkovic 1:35 PM:

can i give you a call

it will be faster

Elvin Pedrosa 1:35 PM:

ok
